

Vasche Bathtubs

Le vasche da bagno in Corian® – primo Solid Surface al mondo, presente sul mercato da oltre 50 anni – sono opache e setose al tatto. Vengono realizzate a mano partendo dalla lastra; questa lavorazione permette di poter modificare misure e angoli rispetto alla versione standard senza che i tempi di consegna subiscano delle variazioni. I modelli di grandi dimensioni, nel caso in cui ci siano delle difficoltà di accesso in abitazione, possono essere realizzati in più segmenti che vengono saldati in loco dai tecnici di Rexa Design. Le vasche possono essere opzionate di impianti airpool, idromassaggio e cromoterapia.

Le vasche da bagno in Korakril™ e Korakril™ Blend – il Korakril™ è un Solid Surface acrilico puro al 100%, la versione Blend contiene una bassissima percentuale di poliestere – sono opache e setose al tatto, vengono realizzate per colatura dentro degli appositi stampi utilizzati solitamente per ottenere forme morbide e ovoidali con spessori sottili. Non è possibile modificarne il profilo e le dimensioni a catalogo, ad eccezione della realizzazione di stampi ad hoc. Le vasche che hanno sagome morbide possono essere verniciate esternamente con laccatura Soft Touch, speciale trattamento che segue le dilatazioni del volume quando vengono riempite di acqua calda, o con argilla stesa a mano. Le vasche possono essere opzionate di impianti airpool, idromassaggio e cromoterapia.

Le vasche in Gelcoat si presentano lucide come il materiale ceramico, su richiesta è possibile ottenere la superficie opaca, e vengono realizzate per colatura dentro appositi stampi. Il Gelcoat è lo strato di finitura esterna, una vernice densa con spessore di oltre 1 mm che viene applicata sullo stampo prima della colatura, rimanendo poi fissata alla vasca una volta aperto lo stampo. Forme e dimensioni differenti dallo standard possono essere realizzate costruendo uno stampo su misura.

The bathtubs made in Corian® – first Solid Surface material ever, present on the market since 50 years – are matt and soft to the touch. They are handmade, starting from Corian® sheets, this manufacturing system allow us to modify measures and corners without extending delivery terms. The big bespoke bathtubs can be also realized in several parts to avoid problem of delivery and access to customer's house and assembled by Rexa Design specialist. The bathtubs are available with airpool, whirlpool and chrome therapy system.

The bathtubs made in Korakril™ and Korakril™ Blend, are matt and soft to the touch, they are realized dripping the material into moulds to obtain mainly rounded edge and ovoid shapes with thin thickness. In this case, dimensions and aspect can't be modified expect by the realization of a bespoke mould. The bathtubs with rounded edges can be externally lacquered with Soft Touch paint, special treatment that follows the bathtubs dilatation when filled with warm water, or coated with clay. Some bathtubs are available with airpool, whirlpool and chrome therapy system.

The bathtubs made in Gelcoat are glossy like ceramic, the matt version only on demand and they are realized with a mould. Gelcoat is the external coating, a dense and thick varnish (over then 1 mm) which is apply in the mould before dripping. Other shapes and dimensions can be realized only with bespoke mould.

Optional benessere per vasca Wellness systems for bathtubs

La ricerca del benessere psicofisico che Rexa Design persegue nella realizzazione delle sue collezioni, si declina nei sistemi dedicati al relax, installabili alle vasche da bagno. Rexa Design propone tre sistemi idroterapeutici all'avanguardia e combinabili tra loro:

- airpool: aria dal fondo per un massaggio rigenerante;
- idromassaggio: aria e acqua dai lati per un massaggio stimolante;
- cromoterapia: combinazione di colori per un completo relax.

I sistemi possono essere installati singolarmente o abbinati tra loro per un maggiore effetto benessere:

- airpool + idromassaggio + cromoterapia;
- airpool + cromoterapia;
- idromassaggio + cromoterapia;
- airpool + idromassaggio.

L'unione dei tre sistemi consente di combinare alla perfezione relax, attività tonificante e rimodellante e benessere psico-fisico.

Airpool

Il sistema airpool si basa sull'erogazione di bollicine d'aria all'interno della vasca per un massaggio rigenerante volto al rinnovamento, alla compattezza e alla tonicità dei tessuti. L'aria viene soffiata nella vasca tramite dei microfori posti sul fondo, secondo uno schema studiato e specifico, dedito all'erogazione precisa dell'aria per un massaggio rinvigorente. Tale sistema prende ispirazione dalle vasche termali dove, per via naturale il vapore gorgoglia dal fondo. Grazie al sistema ad aria, le condutture dei microfori vengono asciugate automaticamente al termine dell'utilizzo.

Sistema idromassaggio

Il sistema idromassaggio si basa sull'erogazione di acqua calda mescolata ad aria per un massaggio energico, il quale consente di combattere la cellulite, migliorare la circolazione e l'ossigenazione dei tessuti. Il sistema si compone di bocchette, disposte sui lati della vasca, secondo uno schema preciso volto all'ottimizzazione dei risultati, che erogano acqua calda miscelata ad aria. Grazie a una pompa che compone il meccanismo dell'idromassaggio, l'acqua contenuta nella vasca viene aspirata all'interno del circuito, scaldata, miscelata all'aria e poi reimmessa attraverso i diffusori.

Cromoterapia

Il sistema cromoterapia si basa sui principi della cromoterapia secondo la quale l'utilizzo dei colori, normalmente regolato da principi comuni, aiuta il corpo e la psiche a ritrovare il naturale equilibrio stimolando mente e corpo e calmando certi sintomi. Il sistema funziona grazie all'inserimento di un impianto d'illuminazione a tre colori all'interno della vasca (impianto sicuro e isolato) che permette di "colorare" l'acqua secondo tre cicli cromatici studiati appositamente per ottenere il massimo beneficio psico-fisico: Tonic, Relax e Energy.

The research of psychophysical wellness that Rexa Design pursues during the creation of its collections, is implemented in the systems dedicated to relax that can be installed on bathtubs. Rexa Design offers three innovative hydrotherapy systems that can be combined with each other:

- airpool: air from the bottom for a restoring massage;
- whirlpool: air and water mixed up from the sides for a stimulating massage;
- chrome therapy: color combination for a complete relax.

The systems can be individually installed or combined with each other for a greater wellness effect:

- airpool + whirlpool + chrome therapy;
- airpool + chrome therapy;
- whirlpool + chrome therapy;
- airpool + whirlpool.

The combination of the three systems allows a perfect match between relax, toning up and remodelling activity and psychophysical wellness.

Airpool

The airpool system is based on the distribution of air bubbles inside the bathtub for a regenerating massage aimed at the regeneration and toning up of tissue. The air is blown into the bathtub through micro holes placed on the bottom, according to a rehearsed and specific method, intended to the precise distribution of air for a reinvigorating massage. This system takes inspiration from thermal baths where, in a natural way, the steam gurgles from the bottom. Thanks to the air system the ducts of micro holes are automatically dried after use.

Whirlpool

The whirlpool system is based on the distribution of hot water mixed up with air for a vigorous massage, which helps reducing cellulite, improve flow of blood and oxygenation of tissues. The system consist of nozzle, arranged on the sides of the bathtub, following a precise methods aimed to results optimization, that distribute hot water mixed up with air. Thanks to a pump, that compose the mechanism of the whirlpool system, the water contained in the bathtub is loaded in the circuit, heated, mixed up with air and reintroduced through the nozzle.

For an optimal result, it is suggested to maintain the water temperature between 33° and 37°C (33°C – energizing massage, 37°C – relaxing massage). While using the whirlpool, use of shower gel and minerals is avoided, they can damage the system. To gain maximum benefit from the whirlpool bath, is recommended a duration of 20-30 minutes, and a relaxing time wrapped in the sponge for about 10 minutes to restore blood flow.

Chrome system

The chrome system is based on the principles of color therapy, according to which the use of colors, usually regulated by common principles, helps the psychophysical restoration by stimulating mind and body and calming certain symptoms. The system is composed of a three colors lighting system installed inside the bathtub (isolated and non-dangerous) that "paint" the water according to three chromatic loops, specifically set up to gain the maximum psychophysical benefit: Tonic, Relax and Energy.
